

# TUĞBA YILDIRIM

Junior Data Analyst | SQL •Power BI •Excel

Istanbul,Turkey | <https://00tugbayldrm00.github.io/TugbaYildirim.github.io/>

<https://github.com/00tugbayldrm00> | [www.linkedin.com/in/tugba-yildirim-27b9232b9](http://www.linkedin.com/in/tugba-yildirim-27b9232b9) | 00tugbayldrm00@gmail.com

## Skills

- **SQL (MySQL):** Data Analysis, Joins, Subqueries, Window Functions
- **Python:** Pandas, Data Cleaning, EDA
- **Excel:** Pivot Tables, Advanced Formulas
- **Tableau:** Interactive Dashboards, Calculated Fields
- **Power BI:** Power Query, DAX, Data Modeling
- **Web(Additional):** HTML, CSS, Web Scraping(Python)

## Projects

### Airbnb Turkey 2025 — Tableau Project

- Processed and analyzed a large-scale Airbnb dataset (**10.9M records**) by correcting auto-matched join keys between Listings and Calendar tables to ensure accurate data integration.
- Built interactive Tableau dashboards to analyze pricing, room types, and host performance across districts using bar charts and geographic maps.
- Built interactive Tableau dashboards to analyze pricing, room types, and host performance across districts using bar charts and geographic maps.

### Global Tech Layoffs Analysis — SQL Project

- Cleaned and prepared a global tech layoffs dataset covering the 2020–2023 period by identifying and removing duplicate records using CTEs and window functions.
- Conducted exploratory data analysis to identify layoff trends by year, country, industry, and company using SQL aggregations and rolling totals.
- Identified peak layoffs in 2022 (**106,520 layoffs**) and determined **Consumer and Retail** as the most affected sectors over the analysis period.

### Price Tracker & Email Alert Bot — Python Project (Web Scraping)

- Built an automated price tracking bot using Python (**BeautifulSoup, requests**) to scrape product title and price data from an e-commerce website and log daily updates into CSV files.
- Implemented data storage and automation using **csv, pandas**, datetime, and scheduled daily execution with automation&alert system to track historical price changes.
- Developed an email notification system with **smtplib** to automatically trigger alerts when the product price dropped below a predefined threshold.

### Data Jobs Survey Analysis — Power BI Project

- Cleaned and transformed survey data from 630 respondents using Power Query, consolidating categorical variables and preparing the dataset for analysis.
- Built an interactive Power BI dashboard to visually analyze salary, job satisfaction, and job difficulty across data roles and demographics.
- Identified key insights, showing moderate satisfaction with work-life balance (~5.7/10) and learning opportunities (~5.6/10) across surveyed roles.

### Bike Purchase Analysis Dashboard — Excel Project

- Cleaned and standardized a dataset of 1,027 records by formatting categorical variables and normalizing income values to ensure consistent analysis.
- Built an interactive Excel dashboard to analyze bike purchase behavior using Pivot Tables, charts, and slicers across demographics.
- Identified key purchasing patterns, showing higher purchase rates among individuals with **1 or fewer cars**, shorter commute distances, and higher average income.

## Work experience

### Mayyapi Decoration&Construction — Intern — Financial&Data Operations | 2 months

- Managed and organized financial records using Excel for **200+ client transactions**, tracking invoices and calculating monthly payments to ensure accurate reporting.
- Coordinated client payment schedules for **50+ promissory notes**, organizing documents by due date and improving workflow efficiency.
- Generated monthly financial summaries and basic sales insights, highlighting top-selling products and client payment trends to support management decisions.

## Education
